1) Central Recording Connections	2	NA
2) Typical Hearing Room	3	1
3) Typical Hearing Room (w/o Video)	4	4
4) Typical Courtroom	5	6
5) Typical Jury Room	8	10
6) Typical Conference Room	8	11
7) Typical VTC Conference Room with Dual Displays	9	12
8) Typical VTC Conference Room with Single Display	10	14
9) Typical Training Room with VTC	11	16
10) Typical Training Room without VTC	12	19
11) Typical Office and Lunch Room	13	21

AUDIOVISUAL STANDARDS SYSTEM DESCRIPTION NARRATIVES

0) **Background / Basis of Design**

The Audiovisual Standards are the result of several prototype and predecessor projects for both the Superior Court and Court of Appeals. The AV Standards include “lessons learned” from several of these projects while incorporating updated technology. The intent of the Standards is to document AV functionality requirements as well as other AV scope related details for use by the Courts in the acquisition of future AV systems. By standardizing AV system designs, users are provided with a consistent experience, and training, support and maintenance of the AV systems are simplified.

Please note that the standards include video displays which are sized based on previous projects. The size of each display should be evaluated for usable viewing distance as well as ADA compliance (i.e. projection from the wall / head height) for each planned space. Below is a table of recommended display size by viewing range. This chart is based on viewing of text, spaces with video only requirements (such as lunch rooms) can be provided with smaller displays.

Table 1 - Recommended Display Size by Viewing Range

Viewing Range (Feet)	Recommended Display Size	Current Display Model
Less than 12'	50" Diagonal	NEC E506
12' – 15'	60" Diagonal	Sharp PN-LE601
15' – 17'	70" Diagonal	Sharp PN-LE701
17' – 20'	80" Diagonal	Sharp PN-LE801
20' – 24'	90" Diagonal	Sharp PN-LE901

The existing and planned video systems utilize HD Base-T (HDBT) technology to extend digital video signals (such as HDMI video from a laptop computer) over standard network Cat-6A cabling for video switching and distribution to the various video displays in each space.

The use of a wireless presentation device is planned for the larger conference and training spaces. The basis of design product is the Barco Clickshare. There is currently a Clickshare in the Clerk of the Court's Suite 2500 Conference Room. The Clickshare uses a small USB “dongle” to load a software driver onto a laptop computer (Windows or Apple). Once the software driver is installed, the user presses a button on the USB dongle to wirelessly project video to the display. As these wireless systems are better for viewing of static images (such as PowerPoint) and tend to lag with motion video, the use of wired inputs to the video system is recommended for viewing of video from portable devices.

All spaces with touch panel AV control systems will be provided with the ability for remote help desk support and operation by the CTB as is currently implemented in the new 2nd Floor West Courtrooms.

1) Central Recording Connections

Each Courtroom and Hearing Room, along with several specialty spaces, is connected back to Central Recording (Moultrie Suite 2300) to be recorded and monitored using CourtSmart recording servers and software. Each of these spaces provides (4) audio channels, (1) backup audio channel, as well as a low-voltage logic signal to enable the BFL light in each Courtroom and Hearing Room. The BFL light is located at the Clerk's Desk, and indicates that the space is being recorded or is "on the record." Each BFL light is provided by CourtSmart.

Figure 1- Typical CourtSmart BFL or "Blue Man" light. Image Courtesy of CourtSmart

The current connection between each space and the Central Recording Suite is a multi-channel, analog audio cable. Any new Central Recording cables are to be pulled from each Courtroom / Hearing Room AV equipment rack to Suite 2300 by the low-voltage contractor. Cable pathways into the recording server in Suite 2300 are reaching capacity, and the current analog cabling is becoming difficult to source.

Details regarding the existing analog central recording connections can be found in the document "A Contractor's Guide to Interfacing with Central Recording."

CourtSmart is currently working with Dante digital audio networking at other locations. Dante is a standard audio format which transmits multiple channels of audio over standard networking cable and equipment. The Dante format is stable, and is used for critical audio in performance and broadcast uses as well as applications throughout many industries. The use of Dante to connect either future new or renovated Courtroom and Hearing should be considered as the cabling is reduced to one network cable, and no audio hardware is required to interface with the CourtSmart servers.

Adding Dante audio to the existing Central Recording system is straightforward, requiring only basic network equipment (which likely exists) and a \$35 "virtual sound card" license for each CourtSmart server. Existing analog-connected Courtrooms and Hearing Rooms can remain as is, with new spaces or renovated spaces utilizing Dante for connection.

Each new standard Hearing Room and Courtroom will be provided with Dante audio networking to allow for the future upgrade of the Central Recording system to networked

audio. The analog audio connections will also be provided with each system to allow for use with the existing Central Recording system.

2) Typical Hearing Room

Each Typical Hearing Room will be provided with an adjacent AV closet (12 Sq Ft minimum) to house an AV equipment rack. Two Hearing Rooms can share one equipment rack as required.

An 8” poke thru device will be provided at each Litigant Table to provide power, data, and AV connections. Additional AV connection plates will be provided in the Bench millwork as detailed on the AV system drawings.

An 80” LCD TV will be provided for video teleconferencing (VTC) and evidence presentation uses. The TV will be provided with a swingout wall mount with a recessed back box. The display will be mounted on a side wall of the Hearing Room, allowing the Judge, Clerk, Witness and both Litigants to view the display as well as to be seen by the VTC camera located at the display.

A 12X zoom pan, tilt, and zoom video camera will be located above the display and will be provided with a camera extension system to extend the camera video and control signals to the VTC codec located in the equipment rack.

A Court standard, H.323 standards-based VTC system will be provided. The VTC system will be registered to the Court’s existing VTC bridge for multi-point VTC calls.

An 8X4 video switcher with integral control system processor and HD Base-T inputs and outputs will be provided. Inputs to the video system include the VTC system, (2) HDMI and (1) VGA input from each Litigant’s Table poke thru device, and one HDMI input at the Judge’s Bench. These sources will be capable of both local display and of being transmitted to the far site during VTC use.

The audio system provided will be the Court’s standard audio system. Ceiling speakers will be provided for the Well Area and above the Litigant Tables. The Judge will be provided with a control panel providing for both volume control of the Judge’s microphone as well as a “husher” button. When activated, the “husher” will flood the Litigant Table ceiling speakers with pink noise to conceal any conversations occurring during bench conferences. A compact, self-powered speaker with integral volume control will be provided under the Judge’s Bench.

Court’s standard gooseneck microphones will be provided for the Judge, Clerk, Witness, Litigant Tables, and Evidence Lectern. Two additional “button” microphone will be installed into the front and top of the bench to record bench conferences.

A Court's standard DSP (digital signal processing) system with telephone hybrid will be provided for all audio mixing, routing, and audio conferencing. The provided audio DSP units will include Dante digital audio networking for interconnection as well as to allow for a future, network audio based upgrade to the Central Recording system.

An infrared assistive listening system / interpretation system will be provided with (3) modulators and an emitter panel. Interpreter's microphone inputs will be located at both Litigant's Tables and at the Witness Stand.

A feed from the Clerk's PC will be provided for playback of recorded testimony. A typical CourtSmart control panel with a "cue / playback" switch as well as a headphone output will be provided for use by the Clerk. An audio output will be provided at the Witness Stand for occasional use by a Court Reporter.

Control of the audiovisual system will be via two wired, 9" touch panel located at the Bench. One touch panel will be provided for the Judge and one will be provided for the Clerk. The control system touch panel pages will be based on those currently in use in the renovated 2nd Floor West Courtrooms.

3) Typical Hearing Room (without Video)

Each Typical Hearing Room without video will be provided with a nearby AV closet (12 Sq Ft minimum) to house the equipment rack. A total of (3) Hearing Rooms without video can share one equipment rack as needed.

Infrastructure such as wall-blocking, power, and AV conduits will be provided to allow for the future addition of video equipment to these rooms.

An 8" poke thru device will be provided at each Litigant Table to provide power, data, and AV connections. Additional AV connection plates will be provided in the Bench millwork as detailed on the AV system drawings.

The audio system provided will be the Court's standard audio system. Ceiling speakers will be provided for the Well Area and above the Litigant Tables. The Judge will be provided with a control panel providing for both volume control of the Judge's microphone as well as a "husher" button. When activated, the "husher" will flood the Litigant Table ceiling speakers with pink noise to conceal any conversations occurring during bench conferences. A compact, self-powered speaker with integral volume control will be provided under the Judge's Bench.

Court standard gooseneck microphones will be provided for the Judge, Clerk, Witness, and Litigant Tables. Two additional "button" microphone will be installed into the front and top of the bench to record bench conferences.

A Court standard DSP (digital signal processing) system with telephone hybrid will be provided for all audio mixing, routing, and audio conferencing. The provided audio DSP units will include Dante digital audio networking for interconnection as well as to allow for a future, network audio based upgrade to the Central Recording system.

An infrared assistive listening system / interpretation system will be provided with (3) modulators and an emitter panel. Interpreter's microphone inputs will be located at both Litigant's tables and at the Witness Stand.

A feed from the Clerk's PC will be provided for playback of recorded testimony. A typical CourtSmart control panel with a "cue / playback" switch as well as a headphone output will be provided for use by the Clerk. An audio output will be provided at the Witness Stand for occasional use by a Court Reporter.

Control of the audio system will be via two wired, 9" touch panel located at the Bench. One touch panel will be provided for the Judge and one will be provided for the Clerk. The control system touch panel pages will be based on those currently in use in the renovated 2nd Floor West Courtrooms.

4) Typical Courtroom

Each Typical Courtroom will be provided with a 1.6", low-profile, FreeAxez raised floor in the Well Area, as well as cable management with cable access points in the Bench. Each Typical Courtroom requires one full-height AV equipment rack. Preferably, each pair of Courtrooms is provided with an AV closet to house (2) racks or two Courtroom AV systems.

A floor box (in the raised floor) will be provided at each Litigant Table and Evidence Lectern Location to provide power, data, and AV connections. Each larger Courtroom with (4) Litigant Tables will be provided with (4) Litigant Table Floor Boxes and (2) Evidence Lectern Floor Boxes to allow the Evidence Lectern to be placed at one of two available locations. Smaller Courtrooms with (2) Litigant Tables will be provided with (2) Litigant Table Floor Boxes and one Evidence Lectern Floor Box.

Additional AV connection plates will be provided in the Bench millwork as detailed on the AV system drawings.

The main video display for the Jury will be a wall mounted, 90" LCD / LED commercial TV located directly across from the Jury Box. An additional wall mounted, 60" LCD / LED commercial TV will be located behind the Witness Stand for evidence presentation as well as for "virtual witness" use. The "virtual witness" can be used with either the VTC system or a protected witness located in an associated Jury Room. Both of these displays will be provided with a swingout wall mounted and associated recessed back box.

Two 60” LCD / LED commercial TVs will be ceiling mounted above the Gallery Rail on the left and right side of the Courtroom. These displays will service the Gallery. Alternatively, one display may be rotated to face the Judge for use by the Judge as directed.

Several additional, smaller evidence displays will be provided for the Judge, Witness, Clerk(s), and Court Reporter. These evidence displays will be 22” LCD touch screens and will allow for touch annotation by each user over the video being displayed. The video being displayed, as well as any associated annotations, will be capable of being printed out by the printer at the Clerks Desk (via the Judge’s or Clerk’s control system touch panels). A USB port will be provided at the Clerk’s Desk to allow images and annotations to be saved to a USB thumb drive for use with a digital evidence archive system (such as JERs).

The evidence displays for the Judge and Witness will be provided with low-profile desk stands to preserve sightlines. The displays for the Clerks will be mounted to the video monitor rail provided at the Clerk’s Bench. Larger Courtrooms will be provided with (2) Clerk’s evidence displays, smaller courtrooms will be provided with one Clerk’s evidence display. The Court Reporter’s evidence display will use the included table stand for use at the Court Reporter’s desk.

Ceiling mounted, 12X zoom, pan, tilt, and zoom (PTZ) video cameras will be provided with one at the front and one at the rear of the Courtroom. The cameras will be used for video teleconferencing (VTC use), protected witness use, and can also be routed to the Judge’s evidence display for their use in observing persons seated in the gallery (as needed).

Wired HDMI and VGA video inputs, transmitted via HD Base-T, will be provided with (2) inputs at the Judge’s Bench, one input at the Clerk’s Bench and one input at each Litigant Table. Additional inputs to the video system include the feed from the Evidence Lectern, the feed from an associated Jury Room, the (2) PTZ video cameras, and the VTC system.

A Court standard, H.323 standards-based VTC system will be provided. The VTC system will be registered to the Court’s existing VTC bridge for multi-point VTC calls.

A card-frame video switcher with HD Base-T inputs and outputs will be provided. All video will be capable of both local display and of being transmitted to the far site during VTC use.

The Court’s standard evidence lectern will be provided. These lecterns are custom made, and fabrication / shop drawings must be coordinated to ensure that the latest generation of AV equipment is utilized so that the device cut outs are the appropriate size. The lectern includes a side drawer with a video document camera, a video preview monitor on the work surface, a touch panel controller on the surface, and a microphone. Additional cables for the connection of HDMI and VGA inputs from a laptop computer are provided. The touch panel at the evidence lectern is capable of controlling the Courtroom AV system as needed. An integral

equipment rack is provided in the lectern to house the video switcher / control system processor, Blu-Ray disc player, and a control system LAN switch.

The audio system provided will be the Court's standard audio system. Ceiling speakers will be provided for the Jury Box, Well Area and above the Gallery. The Judge will be provided with a control panel providing for both volume control of the Judge's microphone as well as a "husher" button. When activated, the "husher" will flood the Jury and Gallery ceiling speakers with pink noise to conceal any conversations occurring during Bench conferences. A compact, self-powered speaker with integral volume control will be provided under the Judge's Bench.

Court's standard gooseneck microphones will be provided for the Judge, Clerk, Witness, Litigant Tables, and Evidence Lectern. Two additional "button" microphone will be installed into the front and top of the Bench to record bench conferences.

A Court standard DSP (digital signal processing) system with telephone hybrid will be provided for all audio mixing, routing, and audio teleconferencing. The provided audio DSP units will include Dante digital audio networking for interconnection as well as to allow for a future, network audio based upgrade to the Central Recording system.

A Court Reporter audio output will be provided for use by a Stenographer. Two additional "Press" audio outputs will be provided with one on either side of the public entry door to the Courtroom for future use by the press (as permitted).

An infrared assistive listening system / interpretation system will be provided with (3) modulators and two emitter panels (with one at the front and one at the rear of the Courtroom). Interpreter's microphone inputs will be located at each Litigant's tables, at the Gallery Rail and at the Witness Stand.

A feed from the Clerk's PC will be provided for playback of recorded testimony. A typical CourtSmart control panel with a "cue / playback" switch as well as a headphone output will be provided for use by the Clerk.

A Clerk's Call Light in a small desktop enclosure, will be provided at the Clerk's Bench for notification that a Jury in an associated Jury Room requires their attention.

Control of the AV system will be via two wireless, 9" touch panels with tabletop docking stations, located at the Bench. One touch panel will be provided for the Judge and one will be provided for the Clerk. The control system touch panel pages will be based on those currently in use in the renovated 2nd Floor West Courtrooms.

5) Typical Jury Room

A 60” LCD / LED commercial TV will be provided for each Jury Room. Preferably, the Jury Rooms will be provided with a swing-out wall mount with a recessed back box. In spaces where a wall mounted display is not feasible due to ADA code issues, a ceiling mount will be provided for the display instead. Inputs to the TV include a wall plate with (1) HDMI input, (1) VGA input, a fixed PC (provided by the Courts), and a Blu Ray disc player.

Jury Rooms which are associated with a Courtroom will be provided with a microphone input as well for protected witness use in the Jury Room.

A protected witness, located in the Jury Room, with a portable microphone and video camera, will be displayed on the Courtroom video displays (on the display behind the Witness Stand). The protected witness will view and hear the Courtroom camera and audio feeds on the Jury Room TV. The protected witness is heard through the ceiling speakers in the Courtroom.

Each Jury Room will be provided with a 22” touch screen (located on the credenza) for control of the fixed PC. The fixed PC and touchscreen will be used for content selection when viewing of evidence by the Jury (with the JERs software).

The fixed PC, Blu-Ray disc player, and 22” touch screen will be located at the credenza in each typical Jury Room.

Each Jury Room will be provided with a 4” wall mounted touch panel for control of the AV system. The touch panel will be located by the door for itinerant access by the Clerk. Jury Rooms associated with a Courtroom will also use the touch panel to alert the Clerk (via the Courtroom Clerk Call Light) that their attention is required by the Jury.

6) Typical Conference Room

Each typical conference room is equipped with a 6” poke thru device at the conference table to provide power, data, and AV connections.

A commercial LCD / LED TV with swingout wall mount and recessed back box will be provided for each conference room. The basis of design is a 70” LCD.

Inputs to the TV include Cable TV, a wall plate with (2) HDMI inputs and a poke thru device under the conference table with (1) VGA input and an HDMI over HD Base-T extender.

The remote control provided with the TV will be used for control of the AV system.

A speaker phone will be provided by the Courts for audio teleconferencing.

7) Typical VTC Conference Room with Dual Displays

Each Typical VTC Conference Room with Dual Displays will be provided with either an adjacent AV closet (12 Sq Ft minimum) to house an AV equipment rack, or a custom AV credenza with integral equipment racks and ventilation will be provided.

Two or more 6” poke thru devices will be provided at the conference table to provide power, data, and AV connections. Some larger spaces, with a lectern presenting location, will be provided with a wall plate with additional AV inputs for presentations from this location.

Two 80” LCD TVs, mounted side-by-side will be provided for video teleconferencing (VTC) and presentation uses. The TVs will be provided with a swingout wall mount with a recessed back box.

A 12X zoom pan, tilt, and zoom video camera will be located above the displays and will be provided with a camera extension system to extend the camera video and control signals to the VTC codec located in the equipment rack. A second 12X zoom pan, tilt, and zoom video camera will be ceiling mounted at the rear of the space to capture a presenter. A similar camera cable extension system will be provided for the rear camera.

A Court standard, H.323 standards-based VTC system will be provided. The VTC system will be registered to the Court’s existing VTC bridge for multi-point VTC calls.

An 8X4 video switcher with integral control system processor and HD Base-T inputs and outputs will be provided. Inputs to the video system include a cable TV tuner, wireless presentation device, the VTC system and two HD Base-T inputs. These sources will be capable of both local display and of being transmitted to the far site during VTC use.

Each of the HD Base-T inputs will include dual HDMI and one VGA input each. The base design provides connections for both inputs from the conference table with one HD Base-T input at each of two poke thru devices. Alternatively, one HD Base-T input from the conference table could be replaced with one HD Base-T input from the wall plate lectern location (as required for each space layout).

Ceiling speakers will be provided for audio playback, audio teleconferencing, and VTC uses. A pair of ceiling pendant microphone arrays, with Beamtracking technology, will be provided for audio capture during audio and video teleconferencing. Please note that the layout and quantity of ceiling speakers and ceiling microphone arrays should be evaluated for each room. An audio digital signal processor (DSP) will be provided for audio mixing, routing, and audio teleconferencing uses.

Control of the audiovisual system will be via a wireless 9” touch panel. The touch panel will be provided with a docking station located at the credenza or side table in each space. The control system touch panel pages will be based the touch panel in use in the renovated Clerk of the Court’s Suite 2500 Conference Room.

8) Typical VTC Conference Room with Single Display

Each Typical VTC Conference Room with Single Display will be provided with either an adjacent AV closet (12 Sq Ft minimum) to house an AV equipment rack, or a custom AV credenza with integral equipment rack and ventilation will be provided.

Two or more 6” poke thru devices will be provided at the conference table to provide power, data, and AV connections.

A 70” LCD TV will be provided for video teleconferencing (VTC) and presentation uses. The TV will be provided with a swingout wall mount with a recessed back box.

A 12X zoom pan, tilt, and zoom video camera will be located above the displays and will be provided with a camera extension system to extend the camera video and control signals to the VTC codec located in the equipment rack. A second 12X zoom pan, tilt, and zoom video camera will be ceiling mounted at the rear of the space to capture the presenter. A similar camera cable extension system will be provided for the rear camera.

A Court standard, H.323 standards-based VTC system will be provided. The VTC system will be registered to the Court’s existing VTC bridge for multi-point VTC calls.

An 8X4 video switcher with integral control system processor and HD Base-T inputs and outputs will be provided. Inputs to the video system include a cable TV tuner, wireless presentation device, the VTC system and two HD Base-T inputs. These sources will be capable of both local display and of being transmitted to the far site during VTC use.

Each of the HD Base-T inputs will include dual HDMI and one VGA input each. The base design provides connections for both inputs from the conference table with one HD Base-T input at each of two poke thru devices. Alternatively, one HD Base-T input from the conference table could be replaced with one HD Base-T input from a wall plate location instead (as required for each space layout).

Ceiling speakers will be provided for audio playback, audio teleconferencing, and VTC uses. A pair of ceiling pendant microphone arrays, with Beamtracking technology, will be provided for audio capture during audio and video teleconferencing. Please note that the layout and quantity of ceiling speakers and ceiling microphone arrays should be evaluated for each room. An audio digital signal processor (DSP) will be provided for audio mixing, routing, and audio teleconferencing uses.

Control of the audiovisual system will be via a wireless 9” touch panel. The touch panel will be provided with a docking station located at the credenza or side table in each space. The control system touch panel pages will be based the touch panel in use in the renovated Clerk of the Court’s Suite 2500 Conference Room.

9) Typical Training Room with VTC

Each Typical Training Room with VTC (video teleconferencing) will be provided with either an adjacent AV closet (12 Sq Ft minimum) to house an AV equipment rack or a custom AV credenza with integral equipment racks and ventilation will be provided.

A 6” poke thru device will be provided at the instructor’s desk to provide power, data, and AV connections.

Computer training software to allow the instructor to control and display video from each student PC will be provided by the Courts.

The main display for the room will be a 70” Aquos Board interactive display, with touch screen. The interactive display is essentially a large wall-mounted LCD / LED display with touch screen and specialty pens for annotation over computer-based sources. The functionality is similar to a front-projection Smart Board, with the improved video quality of an LCD / LED display. The Aquos Board display ships with a low-profile, flat wall mount for interactive display use.

A second 70” LCD / LED TV will be provided for video teleconferencing (VTC) and presentation uses. For distance learning applications, this display may be located on the rear wall of the space to provide the instructor with a view of “remotely located” students while looking at the local participants. The 70” LCD TV will be provided with a swingout wall mount with a recessed back box.

A 12X zoom pan, tilt, and zoom video camera will be located above the front display and will be provided with a camera extension system to extend the camera video and control signals to the VTC codec located in the equipment rack. A second 12X zoom pan, tilt, and zoom video camera will be ceiling mounted at the rear of the space to capture the instructor. A similar camera cable extension system will be provided for the rear camera.

A Court standard, H.323 standards-based VTC system will be provided. The VTC system will be registered to the Court’s existing VTC bridge for multi-point VTC calls.

An 8X4 video switcher with integral control system processor and HD Base-T inputs and outputs will be provided. Inputs to the video system include a cable TV tuner, wireless

presentation device, the VTC system and two HD Base-T inputs. These sources will be capable of both local display and of being transmitted to the far site during VTC use.

Each of the two HD Base-T inputs will include dual HDMI and one VGA input each. One HD Base-T input will be at the instructor's desk poke thru device and one input is a wall plate location (as required for each space layout).

Ceiling speakers will be provided for audio playback, audio teleconferencing, and VTC uses. A pair of ceiling pendant microphone arrays, with Beamtracking technology, will be provided for audio capture during audio and video teleconferencing. Please note that the layout and quantity of ceiling speakers and ceiling microphone arrays should be evaluated for each room. A headset, wireless microphone will be provided for both local amplification of the instructor in the ceiling speakers as well as for voice capture for audio and video teleconferencing. An audio digital signal processor (DSP) will be provided for audio mixing, routing, and audio teleconferencing uses.

Control of the audiovisual system will be via a wired 7" touch panel located at the instructor's desk. The control system touch panel pages will be based the touch panel in use in the renovated Clerk of the Court's Suite 2500 Conference Room.

10) Typical Training Room without VTC

Each Typical Training Room without VTC (video teleconferencing) will be provided with either an adjacent AV closet (12 Sq Ft minimum) to house an AV equipment rack or a custom AV credenza with integral equipment rack and ventilation will be provided.

A 6" poke thru device will be provided at the instructor's desk to provide power, data, and AV connections.

Computer training software to allow the instructor to control and display video from each student PC will be provided by the Courts.

The main display for the room will be a 70" Aquos Board interactive display, with touch screen. The interactive display is essentially a large wall-mounted LCD / LED display with touch screen and specialty pens for annotation over computer-based sources. The functionality is similar to a front-projection Smart Board, with the improved video quality of an LCD / LED display. The Aquos Board display ships with a low-profile, flat wall mount for interactive display use.

A 10X2 video switcher with integral control system processor and HD Base-T inputs and outputs will be provided. Inputs to the video system include a cable TV tuner, wireless

presentation device and two HD Base-T inputs. These sources will be capable of both local display and of being transmitted to the far site during VTC use.

Each of the two HD Base-T inputs will include dual HDMI and one VGA input each. One HD Base-T input will be at the instructor's desk poke thru device and one input is a wall plate location (as required for each space layout).

Ceiling speakers will be provided for audio playback from video sources. A headset, wireless microphone will be provided for local amplification of the instructor in the ceiling speakers.

Control of the audiovisual system will be via a wired 7" touch panel located at the instructor's desk. The control system touch panel pages will be based the touch panel in use in the renovated Clerk of the Court's Suite 2500 Conference Room.

11) Typical Office and Lunch Room

A 50" commercial LCD / LED TV with swingout wall mount and recessed back box will be provided for each office designated to receive a wall mounted display as well as for each lunch room.

Inputs to the TV include Cable TV and a wall plate with (2) HDMI and (1) VGA inputs.

The remote control provided with the TV will be used for control of the AV system.

Typical Hearing Room
